EDUCATION

Indian Institute of Information Technology, Sri City

B.Tech in Computer Science and Engineering

Aug. 2023 – May 2027

CGPA: 8.95 / 10

EXPERIENCE

Full Stack Engineer Intern

July 2025 – October 2025

Soundverse AI

Remote

- Redesigned the AI generation flow by introducing a **Redis-based fetch mechanism**, reducing project creation **latency by 80%** and significantly improving overall user experience.
- Collaborated closely with backend engineers to integrate and ship new **AI-powered tools**, ensuring seamless end-to-end functionality and production readiness.
- Integrated **Veena DAW** support via **iFrame integration and JWT-based authentication**.
- Refactored the **account deletion flow**, improving security, handling edge cases more gracefully & reducing user-facing errors.
- Integrated new **model versions** and resolved critical **production issues**, improving platform stability across core user workflows.

PROJECTS

Alooo | [🔗](#) | Next.js, Express, PostgreSQL, Node.js

- Engineered a restaurant platform enabling contactless QR table-ordering and a live kitchen dashboard.
- Built a checkout engine allowing guests to split bills equally or by individual menu items.
- Designed dynamic menu management supporting customizable item variations, add-ons, and order tracking.
- Streamlined kitchen operations with real-time Kitchen Order Ticket (KOT) updates and automated billing.

goShell | [🔗](#) | Go, Concurrency

- Built a Unix-like shell in Go with a modular architecture separating parsing and command execution.
- Implemented pipelines (`|`), background jobs (`&`), and file redirection (`>`) using goroutines and process management.
- Developed an interactive terminal with command history, tab completion, and built-in commands (`cd`, `pwd`, `jobs`, `exit`).
- Managed shell state, environment variables, and process lifecycle for reliable command execution.

HTTP/1.1 Web Server | [🔗](#) | Java, Concurrency, TCP/IP, JUnit

- Built a multithreaded HTTP server from scratch using Java (`java.net.Socket`) to understand network protocols.
- Managed concurrent client connections securely by implementing a **ThreadPoolExecutor**, preventing server crashes and thread exhaustion under high request volume.
- Engineered a custom I/O stream parser to process incoming **GET/POST** requests, route endpoints, and return appropriate HTTP status codes (200, 404).
- Authored **JUnit** test cases to validate the request parsing logic and ensure reliable server responses across different network conditions.

TECHNICAL SKILLS

Languages: Go, JavaScript, TypeScript, Java, C, Python

Developer Tools: Git, Docker, Linux

Backend & Frameworks: Node.js, Express.js, REST APIs, FastAPI, Next.js, React.js

Databases & Storage: PostgreSQL, MongoDB, Prisma ORM, Redis, Cloudflare R2

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS

POSITIONS OF RESPONSIBILITY

Domain Lead (Problem Setter) | Gradient Programming Club

Curated algorithmic problems and organized multiple coding contests for college students.

Co-Lead of Tech Team | College Annual Fests (2025–26)

Led the developer team to build official web platforms for flagship fests **Abhisarga** and **Utkrishta**.

Tech Team Member | Web3SSH

Contributed to technical execution for a student-driven summer school program focused on Web3.
